

## MYKITA DIY PROTECTIVE FACE SHIELD: SHOELACE

Designed as a practical contribution to current health initiatives, the below instructions are intended to provide a temporary protective solution in the absence of certified medical supplies (\* please refer to our full disclaimer below).

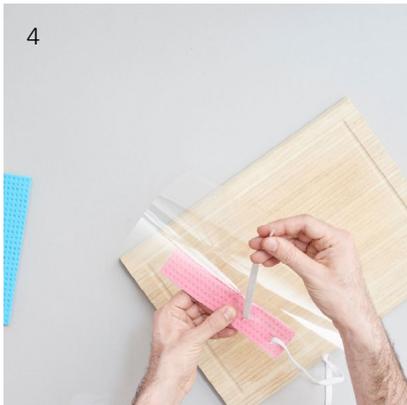

1  
You will need: a cellulose sponge cloth, long shoelace, a sharp knife, and an A4 clear plastic sheet.

2  
Cut a strip of dish cloth about the width of two fingers.

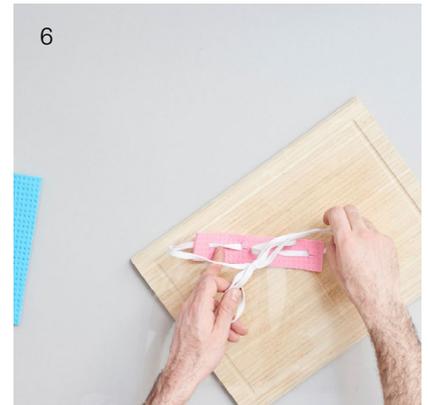

3  
Place the strip along the long edge of the sheet as shown and make 4 evenly spaced incisions in both materials

4  
Thread the shoelace through the incisions as shown.

5  
The ends of the laces should come out in front of the plastic sheet.

6  
Tie a knot to suit your head measurement.

7  
Wear with the soft sponge to your forehead and secure with the tied lace.

8  
Your DIY protective face shield is ready.

\*Disclaimer of liability: The manual for the DIY protective face shields is intended to provide temporary solutions when medical protective equipment is not available. The shields are designed to limit exposure of liquids touching sensitive areas in the face; they offer no protection against airborne viruses. They are not intended for children or persons in need of supervision and must be kept out of their hands. Clean and virus-free materials and tools must be used; the official health & safety guidelines by the World Health Organisation must be observed at all times. The DIY concepts are neither tested nor certified. As such, MYKITA explicitly rejects any liability for the effectiveness, manufacture or proper use of the protective shields. Any claim for damages against MYKITA due to injury to life, body or health – irrespective of the user or respective counterparty – is prohibited. The manufacture and use of the DIY protective shields is the sole responsibility of the user.
